

SSEP EXAMPLE // ELECTRICITY INDUSTRY
DEVELOPED BY // HUNTLY COLLEGE AND MERCURY

ACTIVITY EXAMPLE

KEY WORDS

Electricity | hydro power | kinetic energy | potential energy | mechanical energy | electrical energy | energy supply | watts | gravity | flow | density | efficiency | cost | number | volume | percentage | cubic meters | units | height | weight

ALSO USEFUL FOR

Technology | Business Studies | Economics

PROGRAMME OUTLINE

3 POINTS OF CONTACT

- Staff come into classroom (x2)
- Workplace visit (x1)

EXAMPLE

- 1. Staff come into classroom, introduce themselves, background to the industry, their careers and how maths and science is used in the industry. Discussion about attitudes, behaviours and values important for the workplace. **Student Activity:** hands-on energy transformation models of a wind turbine and a hydro turbine.
- 2. Workplace visit includes tour of power station and offices. Demonstrations of maths and science concepts and models.
- 3. Staff come into classroom. **Student Activity:** electricity generation discussion, energy calculation worksheets.

Videos featuring Mercury to support this learning module can be found in the SSEP Resource Centre video library

SSEP EXAMPLE // ELECTRICITY INDUSTRY DEVELOPED BY // HUNTLY COLLEGE AND MERCURY

ACTIVITY EXAMPLE

Huntly College Year 9 Science & Maths

- 1 Run Sheet
- 1.1 Introduction (5mins)

Taking what you have learnt in the classroom and out on site to do some further learning today.

- 1.2 Interactive Activities (15mins)
- 1.3 Exercise One (15mins)
 - **1a.** Show animation of Hydro station Relate to potential energy, kinetic energy, mechanical energy and electrical energy. https://www.youtube.com/watch?v=q8HmRLCqDAl 0 59 secs.
 - 1b. Potential energy calculation Flow x height x gravity x density and translate into houses
 - 1c. Actual energy calculation 32MW x 3 and translate into houses
 - 1d. Efficiency calculation Potential / actual
 - · Give an example of where there is electrical energy at a Karapiro power station.

SSEP EXAMPLE // ELECTRICITY INDUSTRY DEVELOPED BY // HUNTLY COLLEGE AND MERCURY

ACTIVITY EXAMPLE

1b.

 How much potential energy (MW) is behind the Karapiro dam? (Flow x height x weight of water x gravity ÷ 1,000,000)

How many houses can this energy supply? (1MW can power 1000 houses)

1c.

- How much actual energy is generated by the Karapiro power station?
- How many houses does this energy supply? (1MW can power 1000 houses)
- 1d. How efficient is this? (actual ÷ by potential x 100)

ACTIVITY EXAMPLE

Exercise Two

2a. What are the four different stages of the Karapiro maintenance in the video?

- 1.
- 2
- 3.
- 4.

2b. Calculate the costs of each stage of maintenance and the total cost of the maintenance (each person costs \$500 per day)

- 1. Labour:____ + Materials:____ = ____
- 2. Labour:____ + Materials:___ = ____
- 3. Labour:_____ + Materials:_____ = ____
- 4. Labour:____ + Materials:____ = ____

Total cost of maintenance: \$_____

2c. Calculate the cost of lost generation (\$20,000 per day)

ACTIVITY EXAMPLE

Answers (Not to hand out)

Exercise One

1a.

- Give an example of where there is potential energy at a Karapiro power station. Water behind the dam
- Give an example of where there is kinetic energy at a Karapiro power station. Water moving down the penstock
- Give an example of where there is mechanical energy at a Karapiro power station. Spinning turbine
- Give an example of where there is electrical energy at a Karapiro power station. Generator, transformer, transmission

1b.

How much potential energy (MW) is behind the Karapiro dam? (Flow x height x weight of water x gravity ÷ 1000000)

Flow (360m³/s) x Height (32m) x weight of water per m³ (1000kg) x gravity (9.81m/s) = 113,011,200W ÷ 1,000 = 113,011kW

· How many houses can this energy supply? (1MW can power 1000 houses)

133MW x 1000 = 133,000 houses

How much actual energy is generated by the Karapiro power station?

3 units x 32MW = 96MW

. How many houses does this energy supply? (1MW can power 1000 houses)

96MW x 1000 = 96,000 houses

1d. How efficient is this? (actual ÷ by potential x 100)

96MW ÷ 113MW x 100 = 85% efficient

Exercise Two

- 2a. What are the four different stages of the Karapiro maintenance in the video?
 - Planning
 - Pulling all the parts out
 - Parts repair
 - Putting all the parts back in
- 2b. Calculate the costs of each section of maintenance and the total cost of the maintenance (each person costs \$500 per day)
 - Labour: 3 people for 100 days (\$150,000) + Materials: 0 = \$150,000
 - Labour: 10 people for 20 days (\$100,000) + Materials: 0 = \$100,000
 - Labour: 15 people for 200 days (\$1,500,000) + Materials: \$2,000,000 = \$3,500,000

disclaim any liability to any party for any disruption, loss or injury caused by errors or omissions. © Smart Waikato Trust

Labour: 10 people for 20 days (\$100,000) + Materials: 0 = \$100,000

Total cost of maintenance: \$3,850,000

2c. Calculate the cost of lost generation (\$20,000 per day)

- How many days did it take to do the maintenance? 240 days
- What is the lost cost of generation? 240 x \$20,000 = \$4,800,000

ACTIVITY EXAMPLE

Whiteboard Information (Not to hand out)

- 1000 Watts (W) = 1 kilowatt (kW)
- 1000 kW = 1 Mega Watt (MW)
- 1 MW = Electricity for 1000 houses
- 1m³/s = 1 cubic meter of water per second
- Karapiro flow is 360m³/s. This is the same as the Huntly Aquatic Centre swimming pool
- Karapiro height is 32 meters
- Weight of a cubic meter of water is 1000kg
- Gravity is 9.81 meters per second
- A single unit at Karapiro is 32MW
